Graduate Software Engineer | Software Engineering | Python | Git/GitHub | Testing | Documentation | Data Pipelines

PROFILE

Recent Software Engineering graduate, achieved First-Class Honours, with a focus on writing clear, documented code, building reproducible workflows and solving practical problems. Built a Python-based final-year project involving data processing, sentiment analysis, documentation and evaluation. Currently building Khulq, an AI companion app using React, Vite and server-side LLM integration. Seeking an entry-level Software Engineer role where I can contribute to real systems, develop through structured training and build strong professional engineering habits within a quality-focused team.

CORE SKILLS

Software development: Python, Git/GitHub, debugging, testing, documentation, structured project work, requirements understanding, bug reporting, quality-focused development and Agile-style working.

Software and data: pandas, Scikit-learn, Jupyter, Matplotlib, APIs, data cleaning, feature engineering, sentiment analysis/NLP, model evaluation and SQL basics.

Digital and product: wireframing/prototyping, usability, accessibility awareness, data handling workflows and AI-assisted development workflows.

Professional strengths: problem-solving, communication, teaching, mentoring, stakeholder communication, organisation, teamwork, reliability and attention to detail.

EDUCATION

BEng Software Engineering (Hons)

University of Greenwich | Completed 2026 | First-Class Honours

Relevant modules: Machine Learning, Human Computer Interaction, Software Engineering Management, Natural Computing, Advanced Algorithms and Data Structures, Information Security, Operating Systems, Statistics with R.

- A-Levels

RR6 | Completed 2023

Subjects: Computer Science, Physics, Psychology

- GCSEs

Rutlish School | Completed 2021

11 subjects including Maths, English and Science - Grade: A*-C

TECHNICAL PROJECTS

News Sentiment and Equity Movement Prediction Pipeline

Final Year Project | Python, reproducible workflow design, data processing, documentation and evaluation

GitHub: <https://github.com/S4iieera/uk-news-sentiment-pipeline>

- Built a structured Python-based workflow to collect, clean, transform and prepare financial/news-related data for analysis.
- Converted raw inputs into model-ready daily features and kept the workflow reproducible through clear project organisation and documentation.
- Used Git/GitHub and clear documentation to make the code, methodology and assumptions easier to review.
- Applied debugging and data quality checks to reduce alignment issues and avoid look-ahead bias when joining news and market data.
- Followed a structured development approach with version control, testing/evaluation outputs and attention to data quality.

Khulq — AI Companion App (Private Commercial Project)

Independent Project | React, Vite, Node.js, LLM API Integration, Mobile-First UI

- Building a full-stack AI companion app using React, Vite and a server-side LLM gateway, implementing persistent memory, follow-up conversations and AI conversation continuity.
- Designed a source citation registry and prompt engineering pipeline to reduce hallucinated references and improve output reliability.
- Implemented mobile-first responsive UI with local-first data storage, graceful fallback behaviour and privacy-focused architecture. Planned for commercial release.

EXPERIENCE

Coding Tutor

Code Ninjas Wimbledon, London | Part Time | Nov 2024 - Aug 2025

- Coached children through a game-based coding curriculum, supporting progress across structured belt levels and individual learning paths.
- Delivered systematic debugging and problem-solving support, helping students identify errors, fix logic issues and build coding independence.

- Explained programming concepts such as loops, conditionals and variables to mixed-ability learners, adapting explanations by age and confidence level.
- Managed small-group classes during low-staff sessions, maintaining engagement, pace and a safe, positive learning environment.

Business Support Assistant

Stop Gap Motors, Farnham, Surrey | Part Time | Approx. 2023 - 2024

- Handled inbound and outbound customer calls, emails and in-person enquiries, providing accurate information and timely support.
- Created and processed invoices with attention to detail, maintaining accurate customer records and vehicle information on internal systems.
- Built strong customer relationships by communicating clearly, resolving concerns professionally and supporting a smooth sales experience.
- Demonstrated organisation, multitasking and customer service skills in a fast-moving business environment.

Event Logistics Support Assistant

Rahat Wedding Decorators, Morden, London | Part Time | 2023 - Present

- Coordinated transport and delivery of decor equipment to multiple event locations, helping ensure timely setup and collection.
- Managed daily schedules for staff, vehicles and event bookings to reduce conflicts, delays and missed requirements.
- Liaised with venues, suppliers and clients to confirm logistics, access arrangements and event requirements.
- Resolved last-minute logistical issues on-site and supported team members to meet deadlines and quality standards.

VOLUNTARY COMMUNITY WORK

Ahmadiyya Muslim Community / AMYA

National and local roles | Voluntary | 2021 - Ongoing

- Supported National Tarbiyyat administration by coordinating with regional/local teams and maintaining records.
- Used Excel, CARS/internal systems and data logs to track responses, updates and reporting.
- Contacted regional teams, local Qiadat representatives and volunteers to collect updates and improve completion rates.
- Volunteered with National Amoomi teams at Jalsa Salana UK with event security, crowd control and attendee guidance.
- Followed safeguarding and health & safety procedures with reliability, confidentiality and responsibility.
